

Project Close-out Report for: One Launchpad for All DEXes: Deploy Tokens on Cardano

Name of Project and Project URL on Catalyst / IdeaScale

Name: One Launchpad for All DEXes: Deploy Tokens on Cardano

Project URL: [Project Catalyst Fund 14 – One Launchpad for All DEXes](#)

Project ID: 1400094

Project Category: Cardano Open Developers

Name of Project Manager: Roman Majovsky

Date Project Started: Nov 24, 2025

Date Project Completed: May 4, 2026

List of Challenge KPIs and How the Project Addressed Them

1. Multi-DEX Token Launch Enablement

The project focused on enabling token launches across multiple decentralized exchanges from a single configuration flow. By extending the launchpad architecture, issuers can define liquidity distribution once and deploy across multiple DEX protocols without duplicating setup.

2. Improved Token Launch User Experience

Traditional token launches require multiple tools and repeated steps across platforms. This project introduced a unified interface where issuers can configure launches and users can contribute, track progress, and withdraw contributions within a single application.

3. Trustless Launch Execution

The project implemented a launchpad agent and smart contract infrastructure that enables automated, deterministic, and trustless execution of token launches and liquidity deployment across selected DEXes.

4. Open Infrastructure for Ecosystem Builders

By publishing smart contracts, backend services, API documentation, and frontend code as open-source, the project reduces integration barriers and enables developers, auditors, and ecosystem participants to build on top of the launchpad.

List of Project KPIs and How the Project Addressed Them

1. Milestone 1 – Smart Contract Delivery

Delivered open-source smart contracts supporting multi-DEX launch functionality:

- Liquidity pool creation across multiple DEX protocols

- Single-configuration launch setup
- On-chain execution logic for coordinated launches

All contracts compile successfully, passed unit tests, and were published with documentation and build instructions.

2. Milestone 2 – Backend, Frontend & Launch Execution

Delivered a complete application stack enabling full token launch workflows:

- Frontend interface for launch creation and participation
- Backend services for configuration storage and transaction building
- Wallet integration for transaction signing
- User contribution and withdrawal flows
- Launchpad agent orchestrating on-chain execution

The system was validated through testnet demos including launch creation, contributions, withdrawals, and wallet signing with Eternl and Lace.

3. Milestone 3 – Public Testnet Deployment

Delivered a public testnet version of the Multi-DEX Launchpad:

- Accessible staging application for trial launches
- End-to-end launch flow demonstration
- Multi-DEX allocation configuration
- Public interaction for contributors and issuers

The deployment enables real user testing and validation of the full launch lifecycle before mainnet.

4. Transparency & Documentation KPI

Published full project documentation and public evidence:

- User manuals for contributors and issuers
- Developer documentation
- API references
- Test evidence and CI runs
- Recorded walkthroughs and demos

This ensures full transparency and accessibility for the Cardano community.

Key Achievements

- Successfully completed all planned Catalyst milestones
 - Delivered open-source smart contracts for multi-DEX launch infrastructure
 - Built a complete application stack including frontend, backend, and execution agent
 - Enabled token launch creation, contribution, and withdrawal flows
 - Demonstrated wallet integration with Eternl and Lace
 - Deployed a public testnet application
 - Published documentation for contributors and token issuers
 - Maintained fully open-source development and public transparency
-

Key Learnings

1. Multi-DEX Launches Require Full-Stack Coordination

Token launches across multiple DEXes require coordination between smart contracts, backend logic, frontend UX, and execution agents.

2. Simplified UX Improves Participation

Providing a unified interface for both issuers and contributors reduces friction and improves usability of token launches.

3. Public Testnet Enables Real Validation

Deploying a public testnet environment allows realistic testing of contribution flows, launch configuration, and execution behavior.

4. Open Documentation Accelerates Adoption

Clear documentation for different user groups significantly improves accessibility and usability of the product.

Ecosystem Value

One Launchpad for All DEXes contributes open-source infrastructure for token launches on Cardano. The project supports:

- Token issuers launching across multiple DEXes
- Users participating through a unified interface
- Multi-DEX liquidity distribution
- Developers building on open infrastructure
- Auditors reviewing smart contracts and execution flows

This strengthens coordination and flexibility within the Cardano DeFi ecosystem.

Next Steps for the Product or Service Developed

Potential next priorities include:

- Security audit of smart contracts
 - Additional wallet integrations
 - Expanded DEX support
 - UX improvements based on testnet feedback
 - Monitoring and analytics improvements
 - Broader ecosystem integrations
-

Final Thoughts / Comments

One Launchpad for All DEXes: Deploy Tokens on Cardano successfully delivered a multi-DEX launch infrastructure from smart contracts to full application stack.

The project provides a working foundation for coordinated token launches across multiple decentralized exchanges, supported by open-source code, public testnet deployment, and full documentation.

We thank the Catalyst community for supporting this proposal and look forward to the next phase of development on Cardano.
